

# School of Earth and Environmental Sciences Fall 2024 Colloquium Series

Wednesday, October 16, 2024

Zoom ID: 865 5163 5654

12:15 PM -1:30 PM

Passcode: 684900

Science Building C-207

## Gregory O'Mullan, PhD

Professor, SEES

### A multi-decade view of lower Hudson River water quality and management challenges

This seminar will examine patterns of coastal water quality in the Hudson River and waterways of New York City. Major factors influencing water quality and the trends in management approach, data availability, and water quality will be discussed, along with examples of studies from the O'Mullan laboratory that attempt to either improve interpretation of commonly used water quality indicators or to evaluate possibilities for new management approaches.
